

ABOUT US

We are 25 year old establishment that specializes in the manufacturing of a wide array of HDPE Pipes.

We also manufacture Irrigation systems and accessories for irrigation and agricultural purpose.

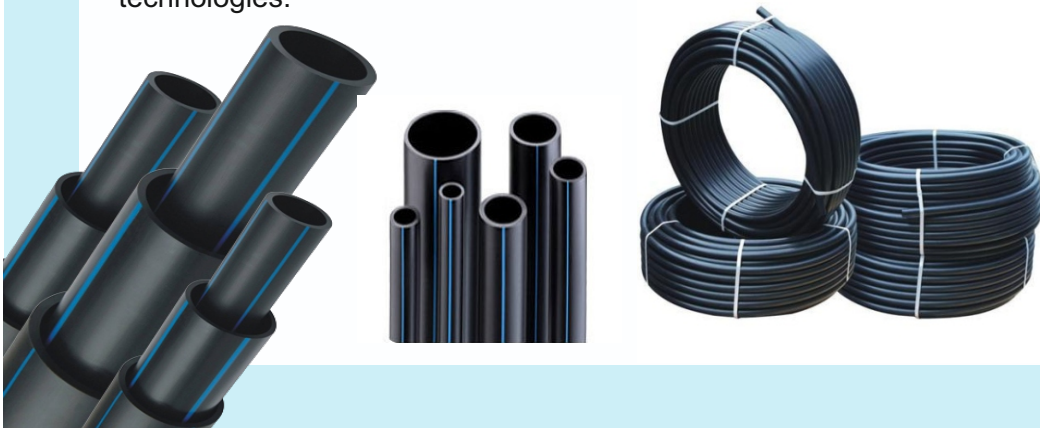

Our highly efficient and cost-efficient products have enabled farmers all over the country to greatly enhance their yield.

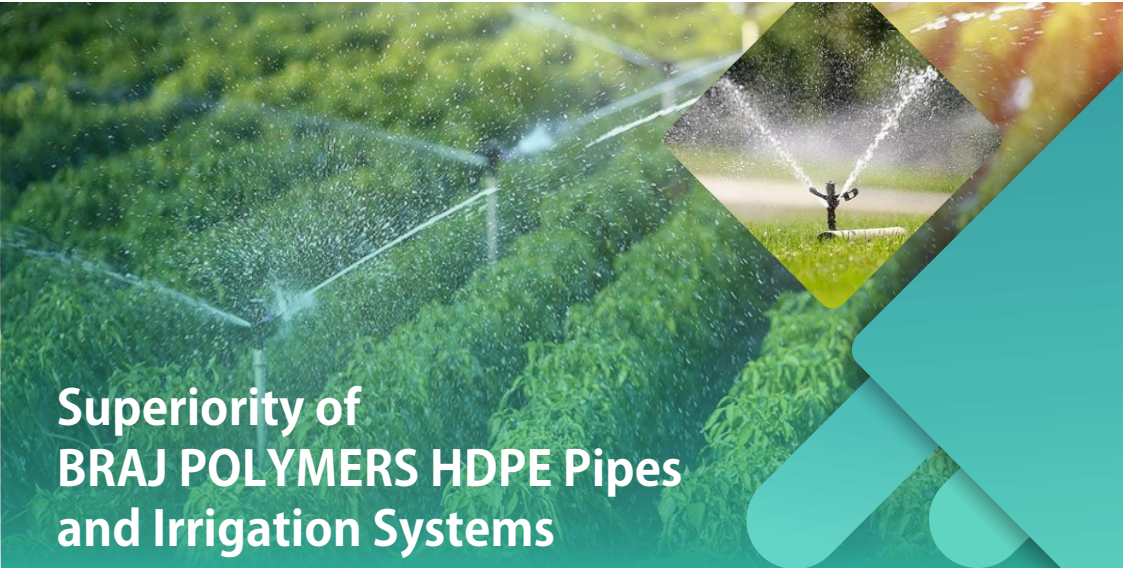

BRAJ POLYMER'S sprinkler system has been designed keeping in mind the scarcity of country's water supply.

Our water saving designs ensure the maximum utilization of all the resources and provide the best outcome for farmers.

We manufacture one of the best HDPE Pipes available in India.

BRAJ POLYMERS ensures this by employing the best manufacturing processes in India with top-notch quality control using the latest technologies.

Superiority of BRAJ POLYMERS HDPE Pipes and Irrigation Systems

Our pipes are manufactured from virgin grade raw materials and are manufactured as per IS 4984:2016 standards. We are also ISO 9001:2015 certified.

Our pipes are durable and light weight. They last for more than 50 years. We have comprehensive range of sizes available from 32 mm. dia. to **315MM.** dia.

Our pipes have smooth internal & external finish. Our pipes do not allow encrustation, They offer good flow properties throughout their lifetime and at reduced pumping costs.

Our HDPE pipes can also be used in telecom and power sectors as cable sheaths and for electrical conduits. They do not transmit stray electric currents from outside.

Our pipes are flexible. They can be supplied in coils and in longer lengths, thereby reducing jointing costs. Flexibility allows these pipes to be laid following natural contours of the ground.

Our pipes are extremely tough and strong enough to last uneven static and dynamic loads.

Our sprinkler irrigation system makes easy and convenient to water fields and plants.

Our sprinkler irrigation system ensures reliability, high quality, affordability, ease of installation and maximum water savings.

Importance of HDPE Pipes and Irrigation systems

HDPE pipes are used in many agricultural, industrial, and domestic activities.

HDPE pipes have excellent corrosion and chemical resistance. They are inert to most acidic and alkaline solution.

HDPE pipes can withstand extreme temperature and pressure zones to provide users with optimum benefits.

HDPE Pipes are most versatile piping material and can carry potable water, wastewater, slurries, and chemicals.

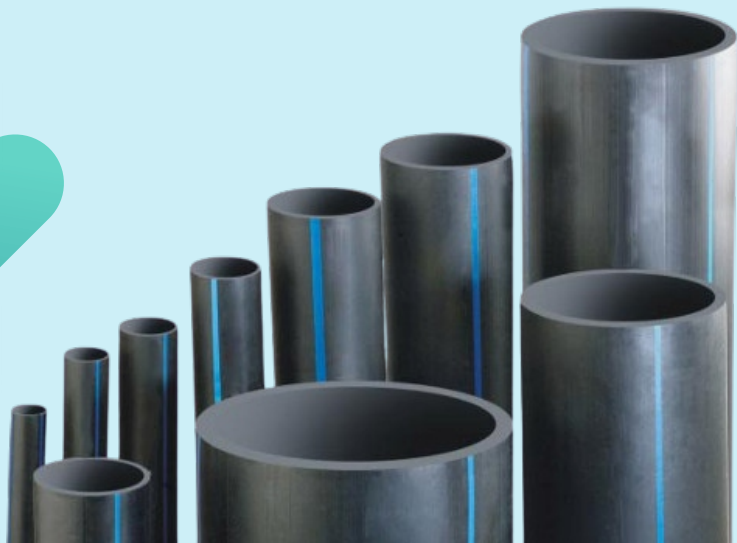

HDPE Pipes have lowest repair frequency per mile of pipe per year.

HDPE pipes possess high environmental stress crack resistance properties.

Sprinkler irrigation systems helps to bring most of the fallow land under cultivation.

Sprinkler irrigation systems stabilize outputs and yield level.

Sprinkler irrigation systems increases the availability of water supply, which in turn increases the income of farmers.

OUR VISION

Every one of us has a commitment to the society at large. We believe that by setting up a most modern plant for producing HDPE Pipes, we are assuring a strong foundation essential to deliver lasting system in pipelines. To ensure quality, we have set up a well-equipped laboratory. Our vision is to become the foremost providers of irrigation facilities for the farmers of India and aiming to become the first choice of millions of farmers in the country. We intend to achieve our vision through:

- ▶ Providing the best quality products at the most economical prices.
- ▶ Reaching out to farmers with the lowest to the highest yield.
- ▶ Implementing a state-of-the-art manufacturing facility.
- ▶ Updating customers with latest Research and development of products.
- ▶ Providing best of technical knowledge
